

## **Government** *Facilities*

Robertson has the solution to help you build a cost-effective, functional, and beautiful government building. There are countless design possibilities available with a wide selection of exterior panel types, finishes, and colors.

We understand the needs of essential services and government buildings, as well as your desire to make them aesthetically pleasing and functional. Whether you're building fire or police stations, hospitals or health care centers, water treatment plants, schools, or city halls or government offices, Robertson has a solution that fits your needs.

### **Count on Robertson's Experience with Government Facilities:**

- Single- and multi-story systems to support office, classroom, large meeting areas, gymnasiums, auditoriums, and administrative space
- Panels can be integrated with conventional construction materials, including glass, brick, and masonry, to provide a sleek aesthetic that mirrors the professionalism of a government building
- Unique steel packages to fit your needs, developed with conventional or metal roof and wall systems
- Virtually maintenance-free steel roofs with high insulation values can conserve energy while reducing operating and maintenance costs
- Engineering, drafting, and project management assistance for the design and manufacture of structural systems

Architectural designs ensure a flawless building that strikes a balance between beauty and functionality.

A custom-designed Robertson building uses a pre-determined inventory of raw materials and manufacturing methods that can efficiently satisfy a wide range of structural and aesthetic requirements. The ability of Robertson products to integrate well with traditional construction materials, including glass, brick, stone, and other veneers, means that your building will reflect the professionalism of a government building.

Robertson building solutions offer design flexibility and limitless scalability, which allows for any changes and the ability to accommodate any unexpected growth. Increasing the length of an engineered building system is easily done by removing an end wall, adding additional frames, wall and roof panels, and reattaching the wall.

Government facility construction is a significant part of Robertson's business, so when it comes to designing your facility, contact us. We can provide a single source of responsibility and work with you for a custom solution that meets your needs.

With over **150 years of experience**, our reputation speaks for itself and it is your assurance that Robertson will bring your vision to life.
